WEDO APP – Final Project

Introduction:

Welcome to our event planning app! Our app is designed to simplify the event planning process and allow you to create a personalized event experience for you and your guests. This user manual will guide you through the steps of using our app to register and fully utilize its features.

Signing Up:

To use our app, you'll need to create an account. You can do this by signing up with your email address. After signing up, you'll be directed to the home page of our app where you can browse the services provided. You can also update your email or mobile number in your profile. Once you've created an account, you can easily sign into the app and start using our services.

Choosing Services:

Our app offers a range of features to help you plan your event. You can choose from catering services, photography services, and venue services. To choose a service, simply check the corresponding checkbox and the app will display a list of services available or posted in the application. For example, if you select catering services, the app will display a list of catering services along with their ratings and locations. Clicking on any of the results will provide you with a summary of the company, its contact information, and a link to its website.

Four Advanced Features included in the Application:

1) Use of Google Maps:

We have integrated Google Maps into our app to make it easier for you to locate the service providers you have selected. Once you have chosen a service, such as a venue or catering service, the app will display the company and its location. This will allow you to easily visualize the location of the company or the event venue. To use Google Maps, simply click on the location on the app. This will open the location in Google Maps, allowing you to see the area around the company and get directions to it. You can also use the zoom-in and out functions in Google Maps to view the location in more detail or to see the surrounding areas.
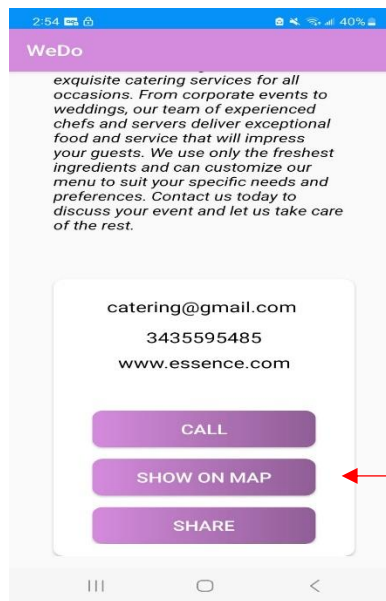

2) *Making phone calls:*

To make it easier for you to communicate with the service providers you have selected, we have integrated a feature in our app that allows you to make phone calls directly from the app. When you select a service provider, such as a caterer or photographer, the app will display their contact information. To call the company, simply click on their phone number and the app will automatically initiate a call.

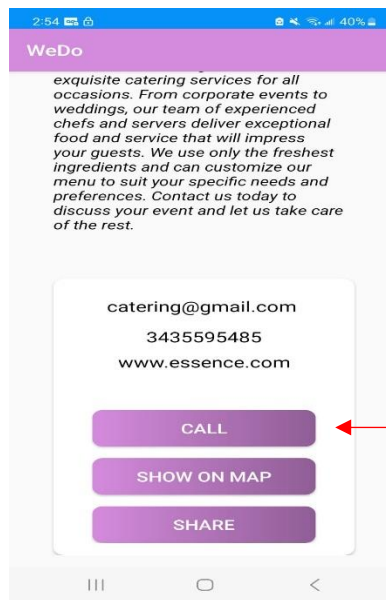

3) *Firebase Database:* The below images show the database of signed up users and the services which are being retrieved in our service page.
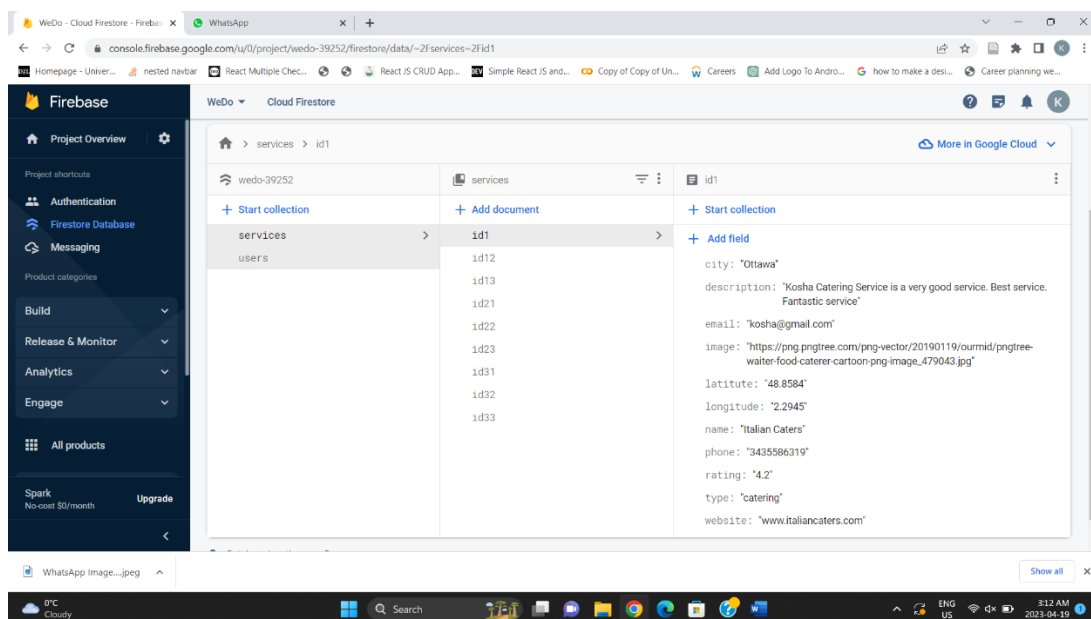

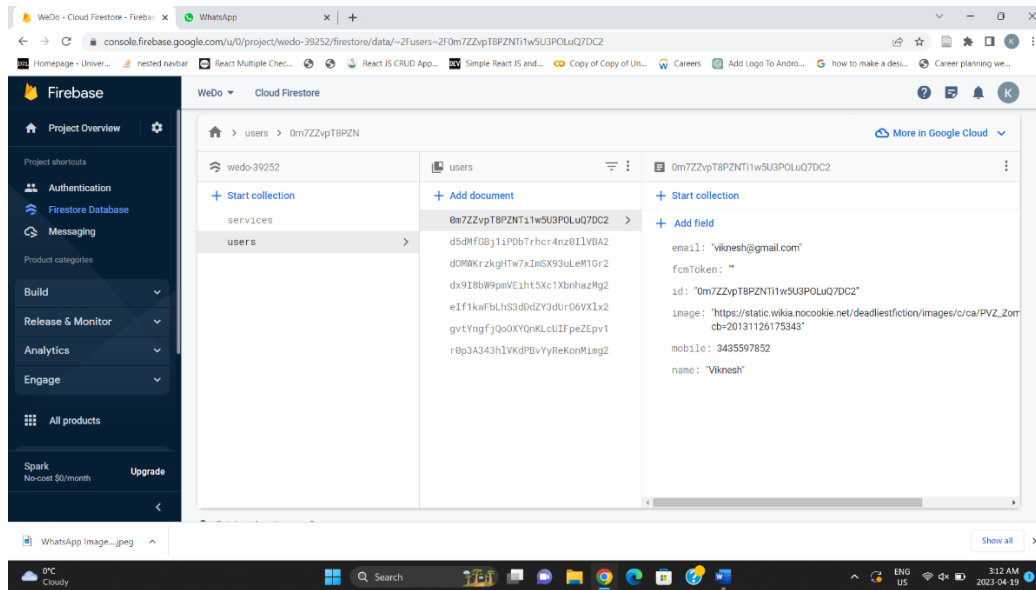

4) *Push Notifications:*

In our app, we've included a push notification function that allows us to give you notifications in real time as soon as they're triggered by our Firebase database. When you receive a push notification, a message will appear on the screen of your device. You can then look at the notification's contents by clicking on it. Please ensure that notifications are enabled for our app in your device's settings to receive push notifications from our app.
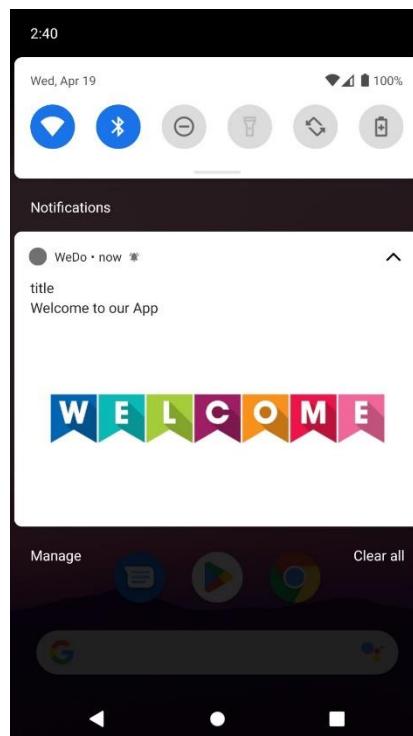

5) *Social App Integration:*

Our app is integrated with the available social media apps on the phone through which information about the services or the venue can be shared as text. The social media apps include WhatsApp, Facebook, Instagram, Telegram, etc.
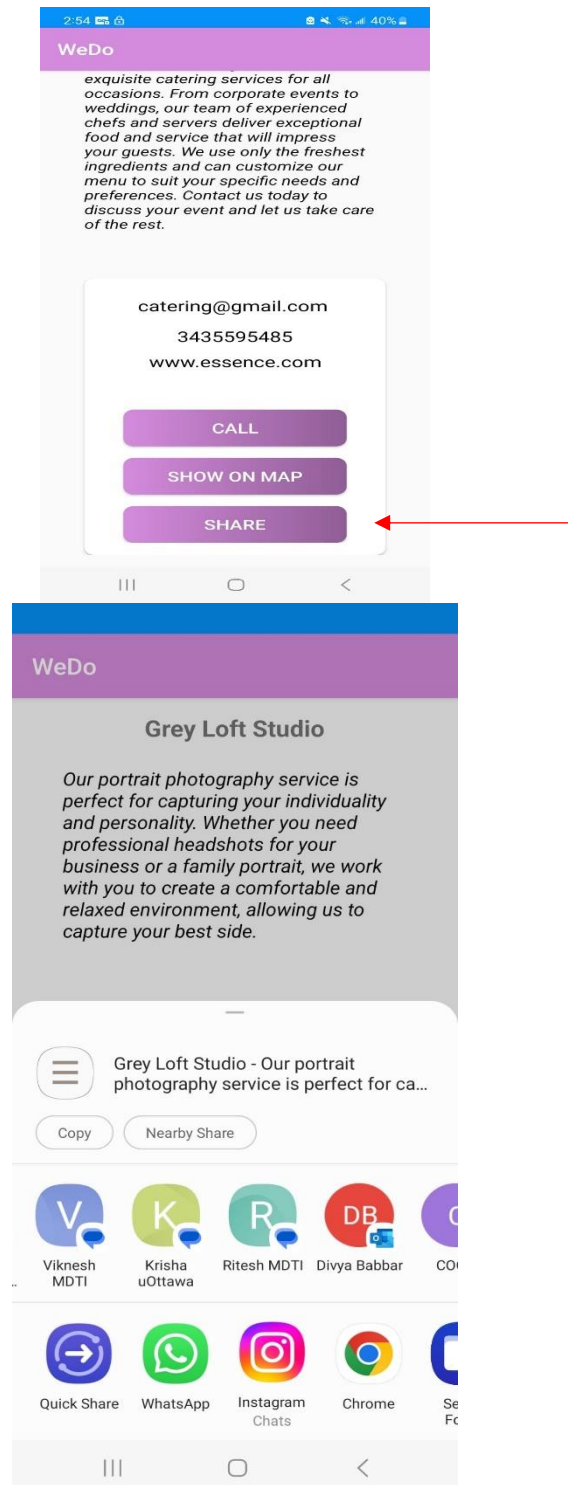

Application:
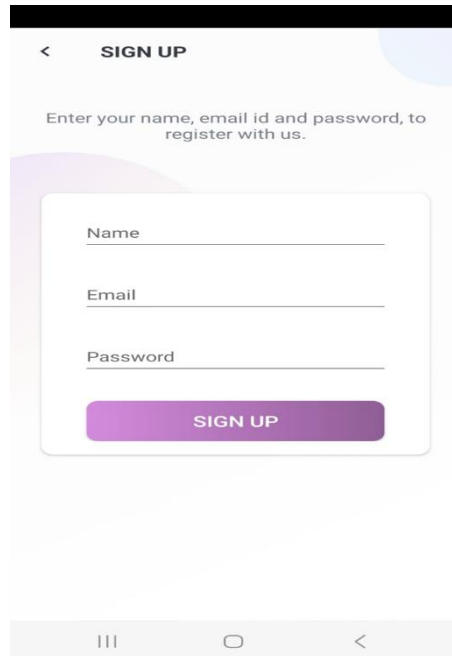

- *Splash Screen* - This is the first screen which will appear when you open the app. It acts like an introduction page that is displayed as a program when the app is loading or booting.

- *Home Page* - This is the home page of our application which shows a little description and image regarding the app. This page allows the new user to sign up and existing user to sign in.
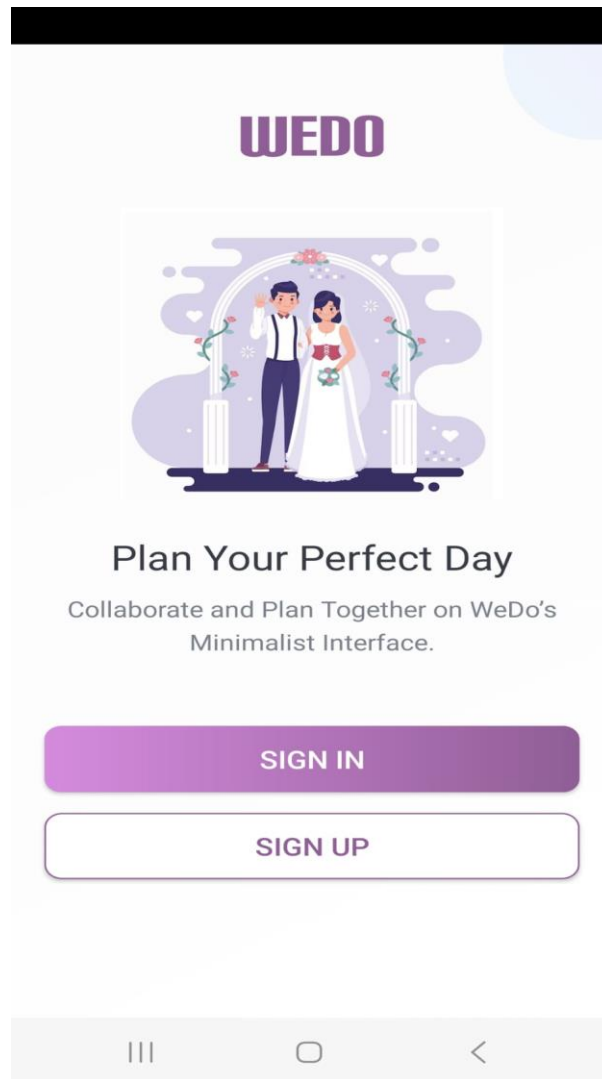

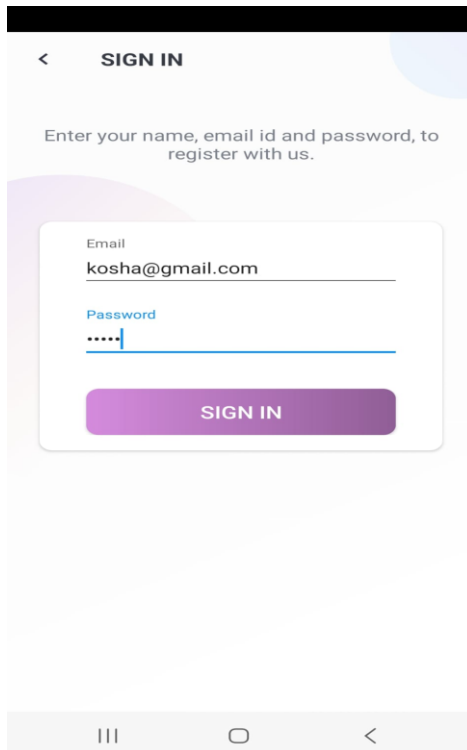

- ***Sign-up Page*** - The sign-up page allows the user to sign in for the first time using their name, email id and password. This is stored in the database.

Once you have signed up , sign in using the email id and password which you used to signed up.
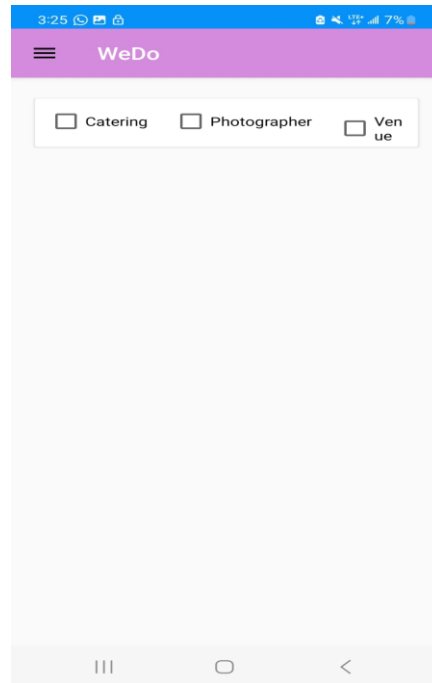

There is an option to view your profile in the application and you can sign out if you wish for.

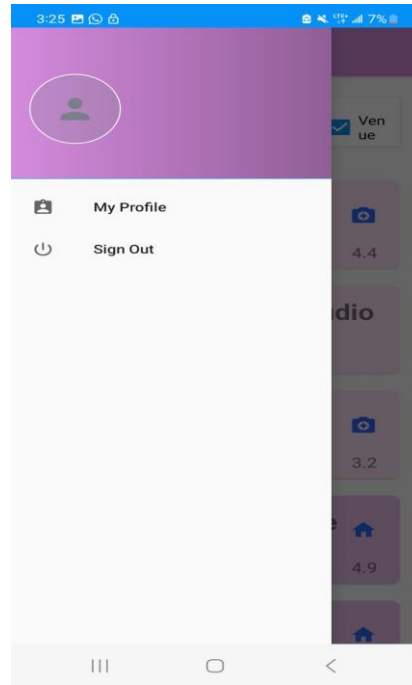

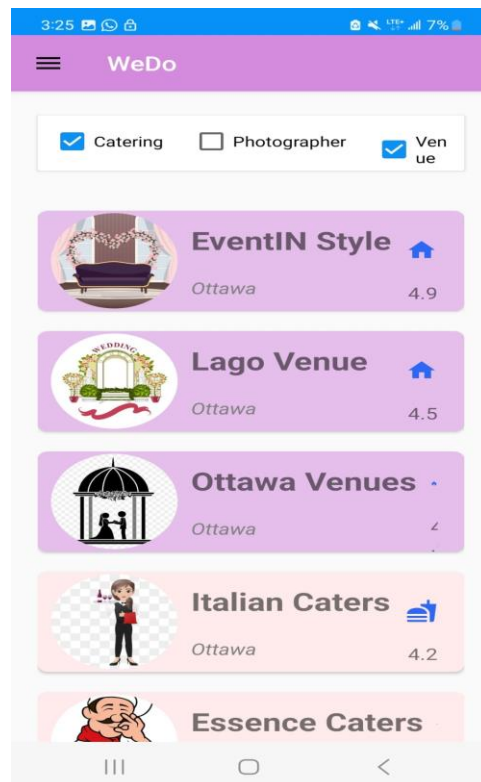

If you click on the **My Profile** , this will display the profile details which you can update according to your preference.
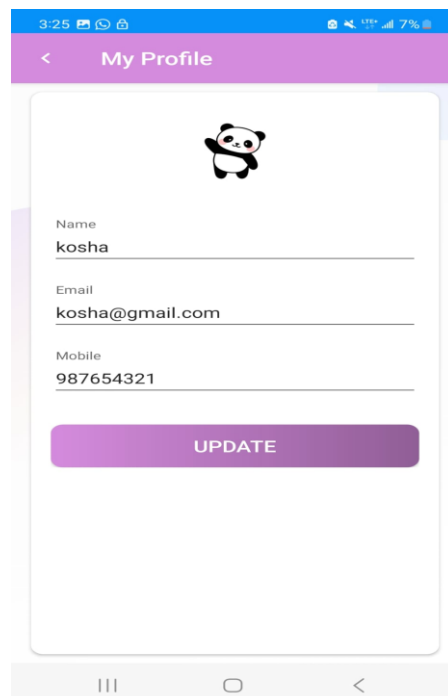

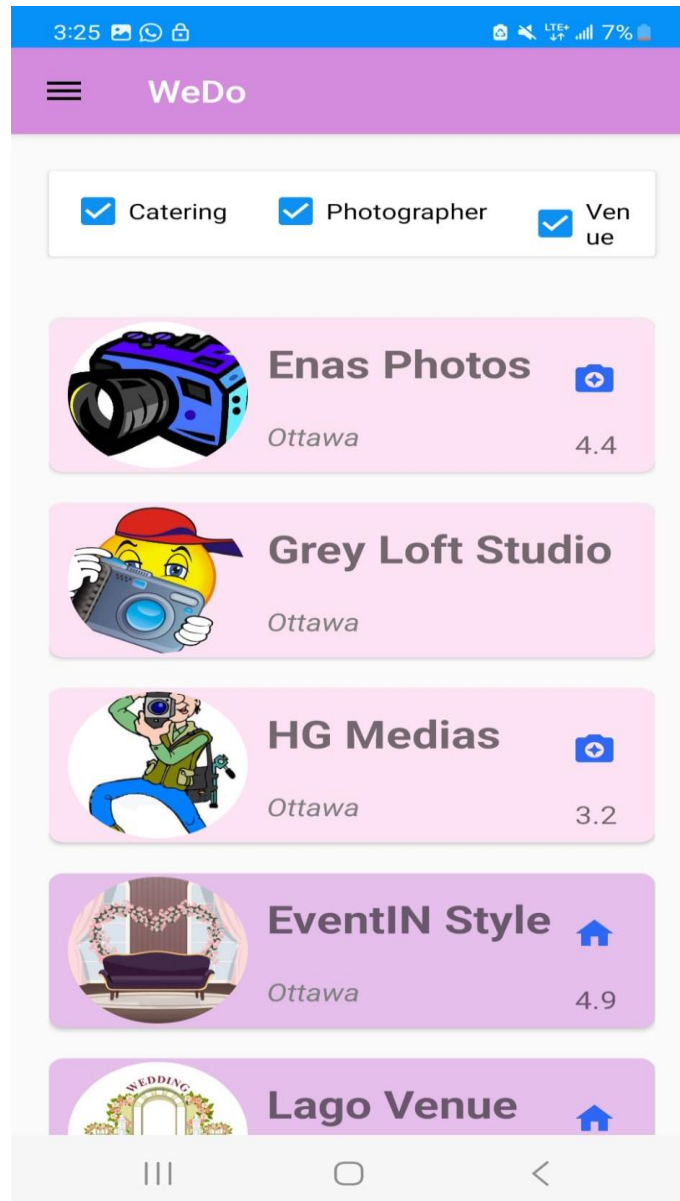

This is the main page of our application which lists the services offered by our application

The below page shows what will display if you choose your desired service.

Based on the check box clicked , the corresponding results are displayed.

By clicking on list of results , the description of the company and their information is displayed.
